Ergo-Boost
Tablet Mount

Flexibility for the way you work

Touchscreens have changed the way we live and work. However, holding tablets for long periods of time can cause strain on our hands, neck and back. The Ergo-Boost Tablet Mount prevents this strain and frees up hands, for a more comfortable working posture.

This tablet holder can be used in a wide range of environments, from home office, to retail, food service and hospitality settings. It is designed to be mounted to a monitor arm, offering a flexible, ergonomic set-up that can accommodate different users.

We offer mounting solutions to suit different tablet weights. Please speak to your Adapt representative to find out more.

Why choose Ergo-Boost Tablet Mount?

Comfortable and efficient
Using a tablet mount means less time is spent holding the tablet and hands are freed up for other tasks, improving comfort and efficiency.

Flexible
Mounting a tablet to a monitor arm brings greater flexibility to the way you work and simplifies tasks such as data entry. Choosing to attach it to a height adjustable arm offers the added benefit of adapting to different users, whether they are sitting or standing.

Secure
Tablets hold valuable information and can be expensive to replace if stolen. The built-in lock keeps tablets safe and secure, offering added security in shared workspaces.

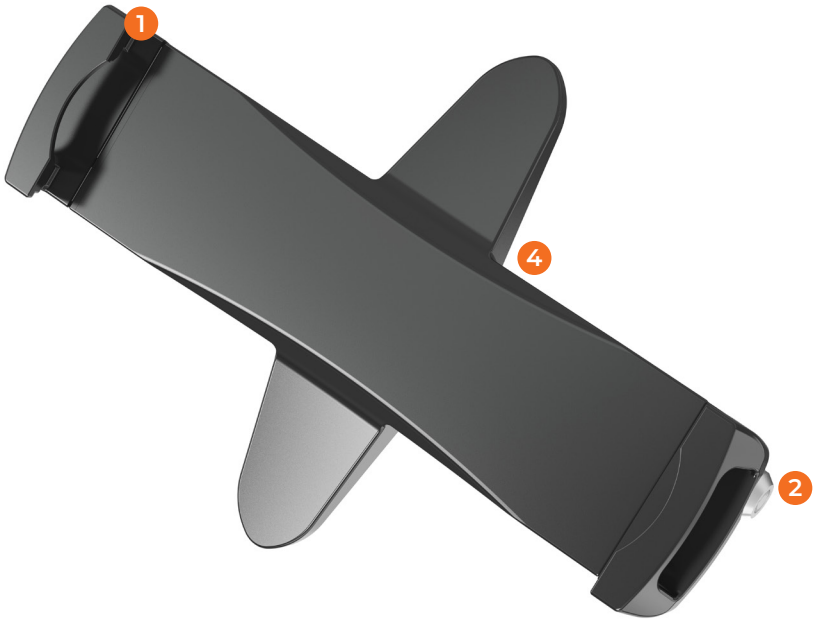

Peace of mind
5 years warranty, for peace of mind.

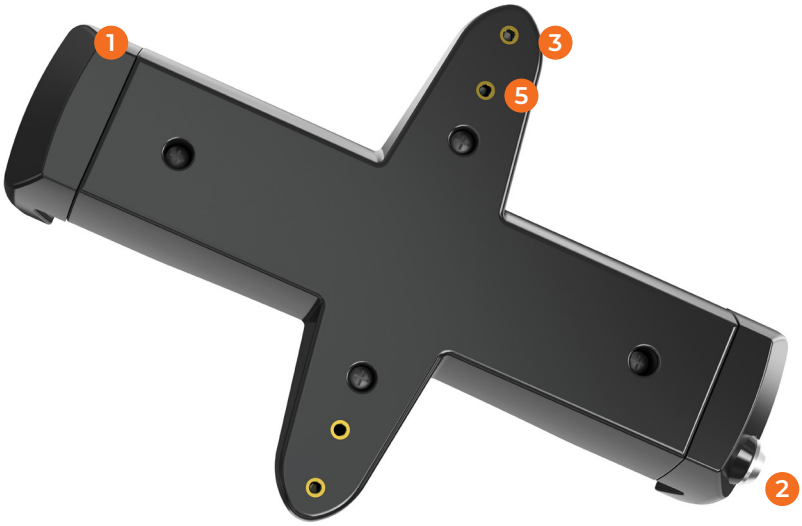

Adjustable
The crossbar can be seamlessly adjusted to hold tablets between 7.9” – 12.5”.

Ergo-Boost

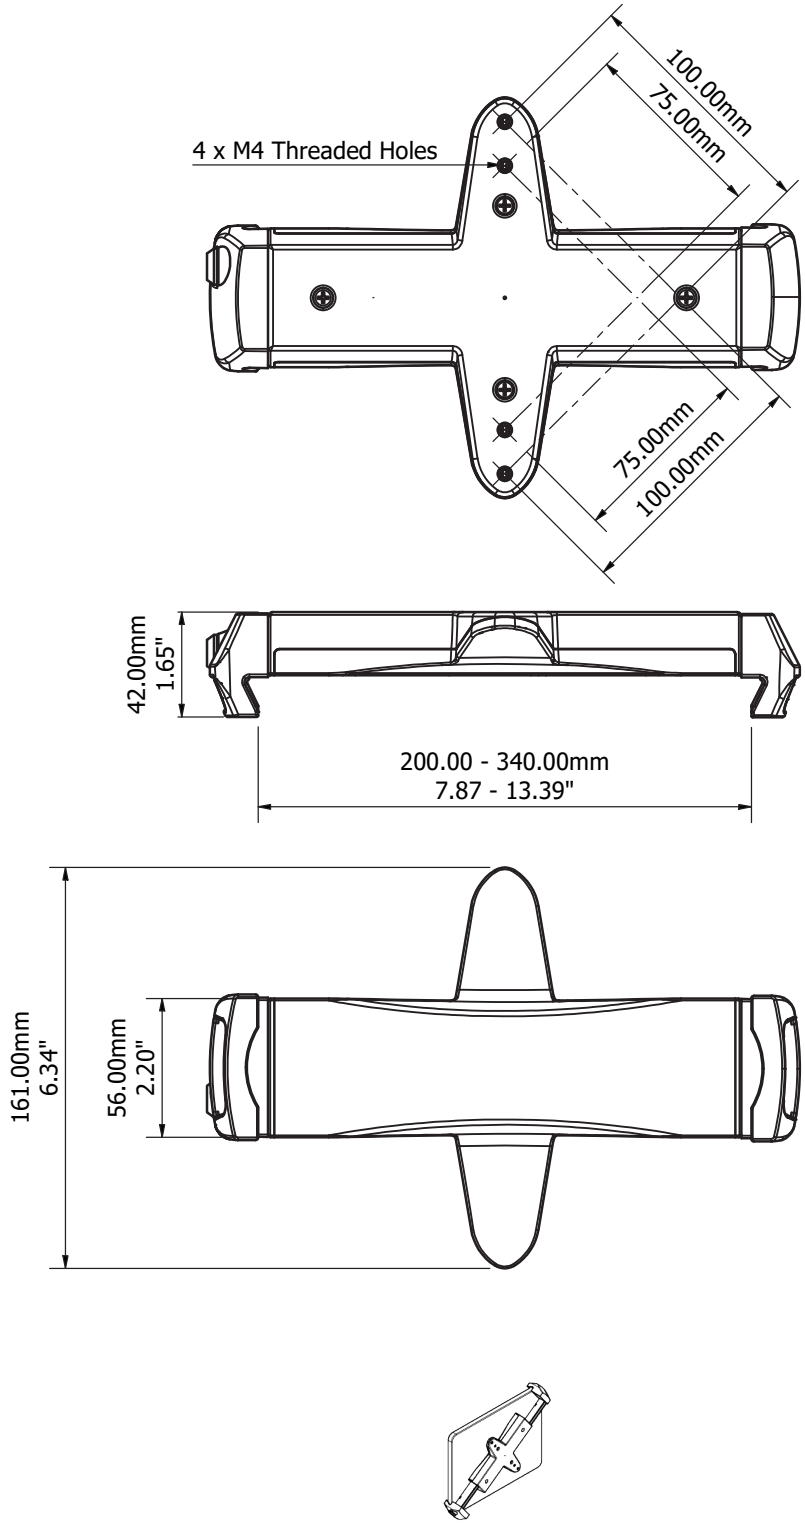

Tablet Mount

1. Adjustable crossbar synchronised for one handed opening
2. Lockable design prevents theft of tablet
3. VESA mounting option allows tablets to be used hands free
